DESIGN

A white circular graphic overlaid on the image. It features two road icons: a winding road at the top and a road with a guardrail at the bottom. The numbers '20' and '14' are positioned on the left and right sides respectively, separated by two diagonal lines that cross in the center. The word 'SCOTT' is at the top and 'ROAD COLLECTION' is at the bottom of the circle.

- SIZE:** S-XXL
MATERIAL
+ Neoprene
FEATURES
+ Made of ventilated neoprene for increased comfort, lumbar support and breathability.
+ Excellent fitted style.
+ Velcro closure for easy size adjustment.
+ All purpose and all weather use.
+ Easy care: machine washable.
+ TPR logo badge in front.
+ Embossed logo on back

MATERIAL TECHNOLOGIES

FIDLOCK® MAGNETIC SNAP SYSTEM.

Secure fastening with minimum effort.

SUPERFABRIC® CERAMIC DOTS.

Durable and highly resistant to abrasions while maintaining flexibility.

STRONG YKK FLEXFIX AVANT® SNAP

Easily adjustable to tailor sleeves for the best fit.

SCOTT STORMCUFF.

Secure fit with optimal waterproofing function.

YKK® CURVED ZIP.

Ergonomic fit to maximize comfort and function.

500D ONROAD OXFORD POLYAMIDE FABRIC.

Durable, quick drying fabric ideal for motorcycle use.

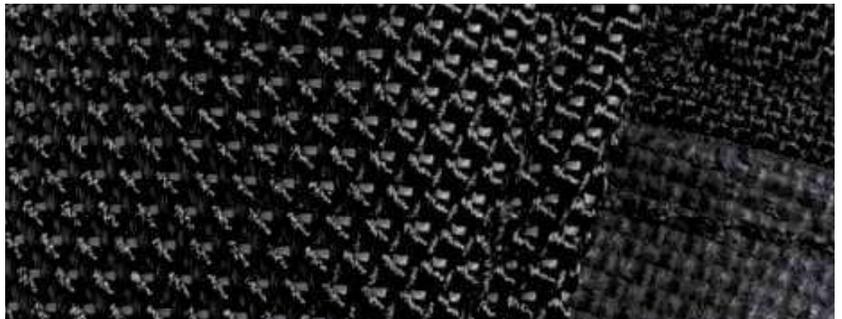

750D ONROAD OXFORD POLYAMIDE FABRIC.

Higher density fabric for extra durability.

WAXED ONROAD FABRIC.

Extremely robust surface.

CORDURA® 500D FABRIC.

Cordura® fabric is renowned for its quality, durability and resistance to abrasions.

DOBBY HITENA® FABRIC.

Heavy duty, densely woven fabric for extreme use.

GORE-TEX® TECHNOLOGIES

GUARANTEED TO KEEP YOU DRY™ PROMISE

For more than 30 years, GORE-TEX® products have been delivering comfort and protection so you can enjoy your outdoor activities with confidence.

The GORE-TEX® membrane is integrated in the garment between the outer material and the lining. It is a perfect barrier to rain and wind, while allowing perspiration to escape. Even in cases of extreme physical exertion, humidity will be transported to the outside of the clothing system and you always stay comfortable in your Scott garments engineered with

3-LAYER GORE-TEX® CONSTRUCTION

For extreme conditions and for best weatherprotection. Outshell, membrane and lining bonded to a functional layer.

Z-LINER GORE-TEX® CONSTRUCTION

Light and soft solution for non-restrictive designs. Membrane inserted liner between outshell and lining.

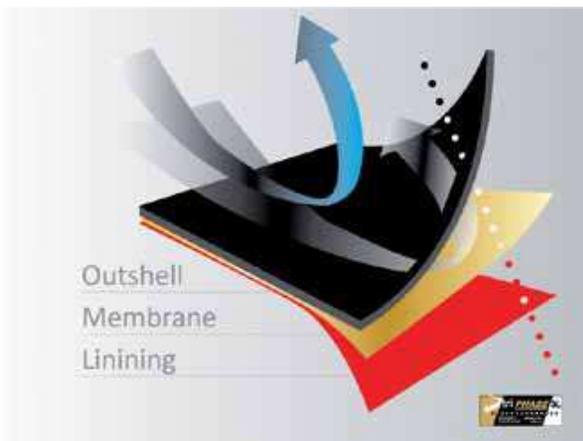

TRIPHASE® TECHNOLOGIES

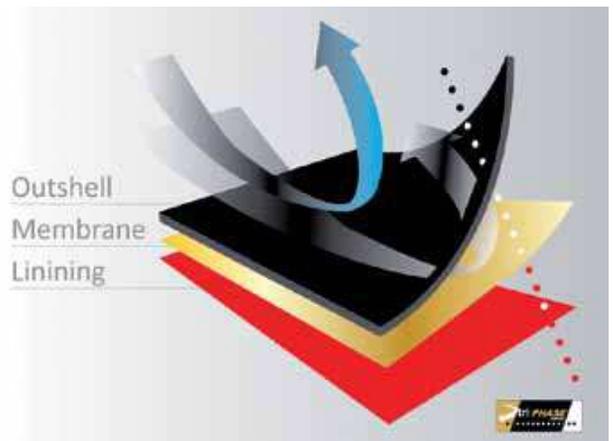

A PROMISE FOR YOUR RIDE

triphase (TP) is a climate control technology based on a PU (polyurethane) membrane developed exclusively by Scott Sports. The construction offers a high level of breathability while also keeping the rider's body climate comfortable by managing outside elements that he or she might encounter. Windproof and waterproof features protect in all weather conditions while breathable aspects allow moisture and vapor to escape to maintain the highest level of comfort.

According to Scott requirements, the 3layer and Z-liner construction is tested under extreme conditions before being approved for use in Scott Motorsports products.

triPHASE 3L: Outshell, membrane and lining bonded into one functional layer. Professional function – fast drying.

triPHASE Z-LINER: membrane inserted liner between outshell and lining. Comfortable solution - reasonable price.

NECK BRACE TECHNOLOGIES

Neck injuries can be of the most serious upper body injuries. The **SCOTT NECK BRACE** was engineered in collaboration with Leatt®, the market leader and pioneer of the “helmet for your neck”. It functions in conjunction with your helmet and is designed to help protect your neck from extreme movements and overall neck loading in the event of an accident. **THE SCOTT NECK BRACE** is engineered with Leatt’s proven Alternative Load Path Technology™ (ALPT™) and features seamless integration of function, movement and looks.

ALPT: ALTERNATIVE LOAD PATH TECHNOLOGY.

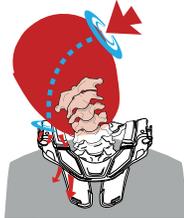

All Scott Braces help protect riders from 5 types of head/neck impacts by employing Alternative Load Path Technology™. This innovation helps disperse the energy, typically transferred to the neck, resulting from an impact to the head* and assists in the transferring of forces away from the vulnerable neck structures to less vulnerable areas of the body and is pivotal in the design of all Scott neck Braces.

In a typical face-plant type accident without a Scott Neck Brace, the force of the impact is transferred from the ground to the helmet, through the helmet to the skull and skull base where it is then transferred through the neck to the back (thoracic spine). With the Scott-Brace fitted, the force will instead transfer from the ground to the helmet, through the helmet onto the Scott Neck Brace once contact is made, some of the force will therefore be transferred to the brace and dispersed to the less vulnerable parts of the torso. If the impact is significant enough, the brace is designed to fail in crumple zones (similar to those seen in cars), thereby helping to absorb some of the energy of the impact.

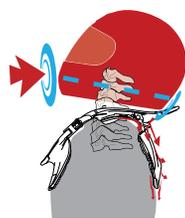

THE SCOTT NECK BRACE HELPS PROTECT AGAINST THE FOLLOWING MAIN SCENARIOS:

HYPEREXTENSION:
over-bending of the head
in rearward direction.

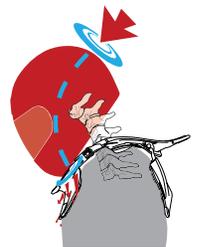

LATERAL HYPERFLEXION:
over-bending of the head
to one side.

POSTERIOR HYPERTRANSLATION:
extreme movement of
head and helmet, rearward
on the neck.

COUPLED AXIAL LOADING:
Helps prevent axial loading
only when the axial forces
act in combination with
other mechanisms.

HYPERFLEXION:
over-bending of the head
in forward direction

DRYOSPHERE® TECHNOLOGIES

DRYosphere

DRYosphere fabrics provide a waterproof/windproof/breathable barrier, protecting you from the elements. Combined with our DRYOzone DWR (Durable Water Repellent), these technologies act as a shield against water and wind, while enabling vapor to escape. This combination of protection and breathability keeps you dry and comfortable in any condition.

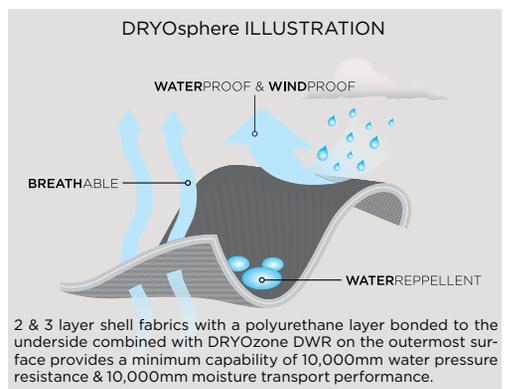

WATERPROOF
Helps you stay dry with eco-compatible durable water repellent technology (DWR) on the outermost surface. It also helps to repel stains.

WINDPROOF
DWR technology also helps you stay warm by blocking out the wind.

BREATHABLE
Helps to regulate your body temperature and keep you comfortable by enabling vapor to escape.

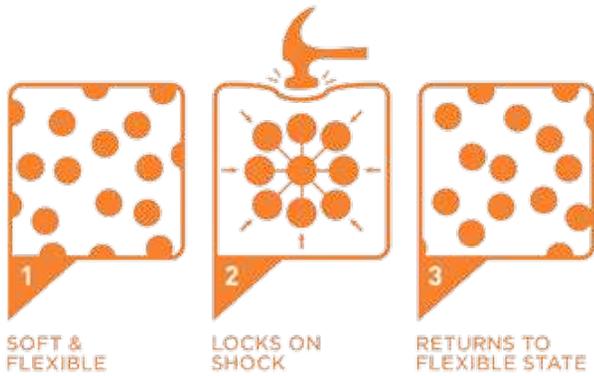

PROTECTION TECHNOLOGIES

HOW DOES D3O™ MATERIAL WORK?

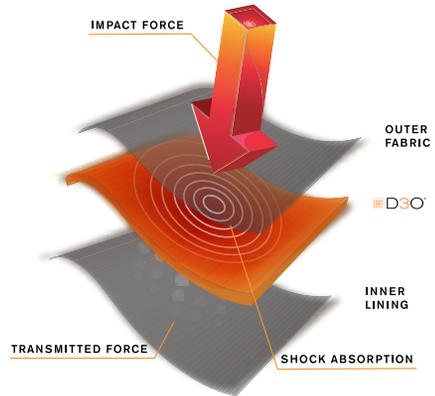

D3O™ is a patented material with intelligent molecules. It flows with you as you move but locks together on impact to absorb energy and protect you.

This unique innovative component provides an optimal freedom of movement and surpasses CE standards.

INCREASED COMFORT AND MOBILITY.

D3O™ back protection is low profile, lightweight, flexible and soft. D3O™ protectors allow for complete freedom of movement and mold to your body so you will not even feel like you are wearing a back protector.

SCOTT SPECIFIC DESIGN

SCOTT CR Back Protectors feature SCOTT's unique 3D mesh back that increases breathability. The adjustable belt helps you customize the fit.

SAS-TEC® TECHNOLOGIES

SAS-TEC experts have years of experience with shock absorbing systems. The systems have passed all of SCOTT's requirements and have significantly outperformed the benchmark for all joint and back protectors in the European Market, known as the CE Standards.

3D-Protector from visco elastic soft foam with outstanding shock absorption values: Residual force according to EN 1621-2 under 9KN (limit Level 2: 9KN). Anatomically perfectly adapted and barely noticeable. High-end engineering for greater performance.
