NECK BRACE TECHNOLOGIES

Neck injuries can be of the most serious upper body injuries. The SCOTT NECK BRACE was engineered in collaboration with Leatt®, the market leader and pioneer of the “helmet for your neck”. It functions in conjunction with your helmet and is designed to help protect your neck from extreme movements and overall neck loading in the event of an accident. The SCOTT NECK BRACE is engineered with Leatt®’s proven Alternative Load Path Technology™ (ALPT™) and features seamless integration of function, movement and looks.

ALPT: ALTERNATIVE LOAD PATH TECHNOLOGY.

All SCOTT Braces help protect riders from 5 types of head/neck impacts by employing Alternative Load Path Technology™. This innovation helps disperse the energy, typically transferred to the neck, resulting from an impact to the head* and assists in the transferring of forces away from the vulnerable neck structures to less vulnerable areas of the body and is pivotal in the design of all SCOTT neck Braces.

THE SCOTT NECK BRACE HELPS PROTECT AGAINST THE FOLLOWING MAIN SCENARIOS:

HYPEREXTENSION:
over-bending of the head in rearward direction.

LATERAL HYPERFLEXION:
over-bending of the head to one side.

POSTERIOR HYPERTRANSLATION:
extreme movement of head and helmet, rearward on the neck.

COUPLED AXIAL LOADING:
Helps prevent axial loading only when the axial forces act in combination with other mechanisms.

HYPERFLEXION:
over-bending of the head in forward direction
